

Making your Yield Monitor Pay!

Creating Hybrid Maps at Planting

- Do you currently have an Ag Leader Insight™ or PF3000™ yield monitor in your combine with GPS? Did you know you can make detailed hybrid maps with your yield monitor?
- You can utilize this technology to have a map of your entire farm, showing where all the hybrids are located and on what soil type. You can overlay hybrid maps onto yield maps and determine how hybrids performed, allowing you to make more profitable decisions for next year.
- Several sprayer monitors with viewable screens can be utilized to make hybrid maps as well.
- Please call, if you have any questions on setting up a yield monitor or sprayer monitor in your planter tractor.
